

The ComProFITS project uses novel software engineering and mathematical/statistical methods for the development of an IT system for (a) multi-dimensional competence assessment of employees and job applicants (competency profile), (b) representation and prioritization of required competences (job profile) and (c) definition and use of the competence gap for efficient recruitment, human resource management (HRM) and vocational training.

The purpose of the workshop is to disseminate the results of the project to potential end users and targeted groups from academia and industry such as HRM departments, job seekers, candidates, employees, students, IT professionals, labor market analysts and recruitment companies.

ComProFITS Dissemination Workshop

Organization:

**Statistics and Information Systems (STAINS) Group,
Department of Informatics, AUTH**
